

The College School – Aalborg

May 2012

Dear colleagues all around the Kingdom of Denmark.

I would like to tell about my experiences with ecoBETA.

Probably, we have all believed that the double flush toilet is the right choice; alas, you might have noticed, as I have, that the buttons often get stuck which causes the toilet to waste water.

Now, the good news is that this problem has been solved by using ecoBETA's, a company from the north western part of Denmark, newly developed and very robust flush valve – 2 types of flushes, just one button.

The valve is simple and needs no maintenance, and here at our school we have replaced all double flush valves with the ecoBETA system. **This has reduced our water consumption by 25%** - yes, you read correctly.

The logical part is that ca. 90% of the toileting at our institution demands the little flush, and with only one button you cannot pick the wrong one.

Sincerely

Lars Iversen

Little flush: push and let go

Big flush: push and hold for 3-4 seconds

Here the buttons often get stuck
